In some programs, ROVs were effectively used; for the deep-sea studies, manned submersibles were required to study highly complex chemosynthetic communities. Final reports were typically published in sets of 4 to 10 volumes (including often voluminous appendices), each with a topical area or synopsis, although some information synthesis reports were single volumes. The ecosystems studies devoted to the northern Gulf of Mexico shelf are described in Section 3. 1, and those devoted to the continental slope are described in Section 3. 2. These are discussed separately because of the inherent differences in community structure, process rates, habitat and biological diversity, and trophic patterns, for example. 3. 1.
